

Do **your** teams struggle with **security remediation**?

You grasp the problem, but the solution feels out of reach...

Many organisations battle to quickly resolve security control weaknesses, despite pressure from executives and regulators. Effective prioritisation and a delivery plan with key stakeholder support can be challenging to achieve:

- Ownership can span several areas. There may be a reluctance to take responsibility, especially under a management spotlight with the risk of failure. Agreement on a way forward can be elusive.
- Some security problems are tough to fix. Operational security teams are often left trying to juggle their day-to-day activities with the substantial effort needed for successful outcomes.
- A typical security project lifecycle is slow, requiring lengthy mobilisation and requirements phases, as well as heavy oversight. These standard delivery mechanisms can hinder remediation progress.

Security issues will deteriorate further while solutions are debated. Under these circumstances, organisations can end up stuck in limbo.

Security Remediation – quicker, cheaper, and safer than DIY

Security Remediation is an end-to-end methodology for resolving security control gaps, with some distinct advantages over dedicated in-house management. It provides:

- Pre-defined prioritisation methods for dealing with security control remediation.
- A structured process to drive remediation delivery.
- The capability to quickly establish and track activities against defined prioritisations.
- Timely, evidence-based reporting to senior management, highlighting progress and issues.
- Steps to cover the transition to BAU, including embedded control metrics.

Security Remediation feature highlights

1. **Rapid mobilisation** – with our pre-defined remediation plans, it is easier to engage stakeholders, agree the outcomes, and get started. This structured approach saves time and money.

2. **Objective clarity** – with candid, independent status reporting, including the Security Remediation escalation engine to flag remediation performance issues, stakeholders receive actionable evidence to target improvements.

3. **Security and delivery expertise** – Security Remediation has been developed based on our experience of resolving cyber weaknesses across some of the UK's largest financial services organisations.

Why choose i-confidential?

We do the thinking for you

Take advantage of our extensive background in security remediation.

We will succeed together

Strong relationships are the foundation of delivering change in organisations.

We keep it simple

Our focus is on delivering effective remediation outcomes for our clients.
