We have the skills and experience to help

Our Control Framework defines and prioritises the controls to secure businesses against the latest threats. It supports our **i-Deliver** product suite and professional service offerings:

i-Assess efficiently provides a complete, quantified list of gaps in an organisation's security controls.

i-Decide delivers a control improvement and risk acceptance strategy by identifying costed activities to reduce risks.

i-Know builds the foundations of good cyber security:

- i-Know Dashboards — a metrics library, with clear MI, to understand cyber risk and drive “route to green” actions.
- i-Know Asset — enhanced asset inventories and identification of security-critical systems.

i-Protect offers proven risk remediation, balancing essential governance and effective delivery for successful outcomes.

i-Operate provides tailored services to support a range of information security requirements:

- Staff augmentation — highly experienced subject-matter experts, project managers, and security analysts.
- Access recertification — our solution provides a rapid, easy-to-deploy method to validate access.
- Third-party — we deliver accurate assessments of third-party inherent risk across wide-ranging security themes.
